PROFILE

Junior Web Developer with a background in Multimedia Engineering and experience creating modern and responsive web applications through academic projects. Skilled in both frontend and backend development, with knowledge of technologies such as JavaScript, React, PHP, and SQL. Passionate about learning new technologies, solving problems, and creating user-friendly digital experiences.

PROJECTS

Learnify – Course Platform (Full-Stack Project)

Team Project – Tamwood Careers

- Developed a responsive frontend using React, implementing key features such as course browsing, search, filters, and shopping cart functionality.
- Built backend components using PHP with SQL database integration to handle user authentication and course data (CRUD operations).
- Implemented core features including user registration/login, dashboard, course management.
- Collaborated in a team environment using GitHub for version control.
- Designed with a focus on usability and responsive UI.
